Population Pyramid

A population pyramid illustrates the age and sex structure of a country's population and may provide insights about political and social stability, as well as economic development. The population is distributed along the horizontal axis, with males shown on the left and females on the right. The male and female populations are broken down into 5-year age groups represented as horizontal bars along the vertical axis, with the youngest age groups at the bottom and the oldest at the top. The shape of the population pyramid gradually evolves over time based on fertility, mortality, and international migration trends.

Spider Graph

A spider graph consists of plotting data on a series of spokes, called radii, with each spoke representing one variable (for example: GDP per capita, literacy rate, life expectancy). The length of each spoke from the center of the graph is proportional to the other spokes. A line is drawn connecting the data points for each spoke. This gives the graph the look of a spider web. The spider graph can be used to answer such questions as: Which characteristics are most similar between countries? Are there outliers?

— United States
— Canada
— Australia

Comparisons 2 Questions

Use the data tables, population pyramids, and spider graph to complete each item comparing the three focus countries.

- Which country is the largest in land size?
- Which country is the most ethnically diverse?
- Which country has the greatest variety of natural resources?
- Which country has the lowest standard of living?
- Which country has the highest percentage of farmers?
- Which country has the healthiest citizens?
- In which country does industry contribute least to the GDP?
- Which country or countries have a negative trade balance?
- Which country or countries have a positive trade balance?
- Which country has the highest tax rate?
- With which of these countries does the United States have the strongest trade relationship?
- According to the spider graph, on which point of comparison are the countries most alike?
- Challenge: Compute the dollar amount spent per year, per person, educating the population in each country. Assume that $\frac{1}{4}$ of the population is in school and round off decimals to the nearest whole number, as needed.

Hint: You will need the GDP, percentage of GDP spent on education, and population of each country to complete the task
